

Electronic Mass Media in Europe. Prospects and Developments: A Report from the FAST Programme of the Commission of the European Communities

L'histoire récente de l'audiovisuel en France ne peut être rapportée sans prendre en compte le changement de majorité politique de 1981. Sans doute les innovations techniques qui interpellent aujourd'hui les différents acteurs du champ audiovisuel étaient-elles déjà présentes ou en germe dès la fin de la dernière décennie précédente. Mais la volonté de l'Etat de faire de la communication audiovisuelle une des clés de voûte d'une nouvelle politique culturelle et économique n'a cessé d'entretenir une tension toute particulière dans un paysage qui n'avait que fort peu voulu de 1974 à 1982, si l'on excepte la dissolution de l'ORTF et la création simultanée de sept sociétés, chacune spécialisée dans une des fonctions de la radio-diffusion (production, programmation, diffusion). Les expériences de télédiffusion lancées en 1975 n'avaient pas été relayées par une politique plus ambitieuse. Seul le projet de satellite de télévision directe TDF I témoignait d'une vision plus prospective, plus aventureuse du développement de l'audiovisuel.
