H 4 fatellitea farellites were difcovered by Dr. Herfehel in the years 1787 and 1789. The two fattllites dilc&vered by Dr. Heriihet are rearer to Saturn than the other five, and therefora flould be celled the firji and fecund; but to difiir.guifh them frm ihs other fatdlites, and to prevent conlufioo in referring to former cblervation?, they are called the (ixth and feventh fatellites. The fetenth fatellite, which is neareii to Saturn, was difcovered a fhort time alter the filth. In the following table, the fatellites are arranged according to their refpective diltances from Saturn, and the Roman figures in the left hand colutrn fhew the number of the fatellite. The figures between the parcetheCes fliew theorde in which they ought to be numbered.: . 1... The firft, fecond, third, and fourth fatellites, as well as the fixth arv feverth, are all ncirly in the fame plane with Saturns ring, and are inclined to the crbit of Saturn in an angle of about 30 degrees j but the orbit of the iifth fatellite iS faid to make an angle of 15 deg ees with the plane of Saturns ring. Sir Ifaac Newton conjeftared that the fifth fatellite of Saturn revolved round its axis in the fame/ time that it revolved about S iturn; and the truth...
