

Azospirillum III: Genetics · Physiology · Ecology Proceedings of the Third Bayreuth Azospirillum Workshop

On June 20 and 21 1985 the third workshop on Azospirillum: Genetics, Physiology, Ecology took place at the University of Bayreuth, West Germany, organized by the genetics department. There were about 80 participants, who came from German research institutions, from other European countries, from India, Egypt, North and South America. The former workshops had taken place in Bayreuth too in 1981 and 1983 respectively, hence the organizers could draw on the experiences then obtained. Azospirilla have, during the past 12 years, found an ever increasing scientific interest, because first, these soil bacteria carry the genetic information for binding molecular nitrogen from the air, and second, they live in close vicinity to the roots of grain crops and forage grasses. By exploitation of these two properties, it is hoped to develop inoculation procedures in soils poor in nitrogen. The reports on the first afternoon focussed, as a result of the Bayreuth research interest, on genetic approaches.
