

Radar at Sea: The Royal Navy in World War 2

This book tells in non-technical language how the British Navy contributed to the development of naval radar in World War 2. Addressed to the general reader, it tells not only the technical story in simple terms, but also of the operational use of shipborne radar at sea - for warning, for fire control, for fighter direction, for navigation, in all theatres of war - and particularly about the people who designed and fitted the equipment, and those who used it at sea.
