

Urban-Rural Interfaces: Linking People and Nature

What is the nature of the urban rural interface? Is it the place where country gives way to residential neighborhoods and shopping areas in a startling way? Is it a simple factor of population density? There is nothing simple about the urban rural interface-Editors David Laband, Graeme Lockaby, and Wayne Zipperer present the broad spectrum of interdisciplinary complexities at play. Organized into three sections on changing ecosystems, changing human dimensions, and the dynamic integration of human and natural systems, this is the new sustainability science, an emerging discipline that calls for integrating social and economic values with the physical, chemical, and ecological functions of ecosystems.

Audience: Scientists and managers in the fields of ecology, soil science, wildlife management, forestry, environmental studies, environmental/natural resource economics, landscape architecture, rural sociology, land-use policy and planning. The American Society of Agronomy, Crop Science Society of America, and Soil Science Society of America are prominent international scientific societies headquartered in Madison, Wisconsin. The Societies specialize in peer-reviewed, high-quality science titles for a wide variety of audiences. Some of the many areas we publish in include: -Soils Methods and Management-Crop Development and Improvement-Agrosystem Management and the Global Food Crisis-Environmental Conservation and Climatology
