

# Nuclear Cardiology in Everyday Practice (Developments in Cardiovascular Medicine)

The most salient feature of the information provided by nuclear medicine is its information from an analytical and pathophysiological and functional characteristic point of view. This approach is essential for adequate experimental or clinical interpretation, such information should be interpreted alongside the accumulated experience in nuclear cardiology views of the clinical cardiologist, who is with the invaluable cooperation of medical able to apply it to the individual patient. It is directed to physicians This approach, which is routine in every day clinical practice, reaches its plenitude nuclear medicine specialists wishing to when the whole process is completed and learn the uses and limitations of these an intimate cooperation is established procedures in everyday clinical cardiology, between the nuclear medicine specialist and to cardiologists who feel the need to and the clinical cardiologist. In such understand the rationale and methodology instances, each one of these professionals of the studies which benefit their patients. We understand that the ultimate reason abilities of the other. for any scientific book is the transmission The present book is the fruit of such of knowledge, and we are fully conscious cooperation. In our hospital, an efficient of the enthusiasm of the authors of the nuclear cardiology team has been made up present text to achieve that aim.
