

## Advances in Catalysis: 51

Catalysis is the acceleration of a chemical reaction by a catalyst, a substance that notably affects the rate of a chemical reaction without itself being consumed or altered. Since 1948, *Advances in Catalysis* has filled the gap between the papers that report on and the textbooks that teach in the diverse areas of catalysis research. The editors of and contributors to *Advances in Catalysis* are dedicated to recording progress in this area.\* Provides a comprehensive review of all aspects of catalytic research \* Contains in-depth, critical, state-of-the-art reports
