

Computer Studies of Phase Transitions and Critical Phenomena (Scientific Computation)

This book is based on research carried out by the author in close collaboration with a number of colleagues. In particular, I wish to thank Per Bak, A. John Berlinsky, Hans C. Fogedby, Barry Frank, S. I. Knak Jensen, David Mukamel, David Pink, and Martin Zuckermann for fruitful and extremely stimulating cooperation. It is a pleasure for me to note that active interaction with most of these colleagues is still continuing. The work has been performed at several different institutions, notably the Department of Chemistry, Aarhus University, Denmark, and the Department of Physics, University of British Columbia, Canada. I wish to thank the Department of Chemistry at Aarhus University for providing me with splendid research facilities over the years. From May 1980 to August 1981, I visited the Department of Physics at the University of British Columbia and I would like to express my sincere gratitude to members of the department for providing me with excellent working conditions. My special thanks are due to Professor Myer Bloom who introduced me to the field of phase transitions in biological membranes and in whose biomembrane group I found an extremely stimulating scientific atmosphere happily married with a most agreeable social climate. During the last two years when a major part of this work was carried out, I was supported by AIS De Danske Spritfabrikker through their Jubilreumslegat of 1981. Their support is gratefully acknowledged.
