

Diagnostic Breast Pathology: A Text and Colour Atlas

This aims to provide a comprehensive colour atlas showing histological, histochemical and electronmicrographic appearance of breast disease. Reflects recent developments in the diagnosis and management of breast lesions, including the effect of breast screening and mammography techniques. Also features sections of two parallel texts to explain and illustrate diagnosis of easily confused and diagnostically difficult conditions. With hundreds of colour illustrations the emphasis is on new diagnostic techniques throughout the atlas and each topic includes a section devoted to the diagnostic and clinical aspects. It is designed as a bench book for trainee and practising pathologists.
