

Advances in Bioclimatology 3 (v. 3)

This volume contains reviews on different aspects of human, animal and plant bioclimatology; the mechanisms linking human melanoma with radiation from both the sun and artificial sources; field and experimental studies on the health of farm animals in adverse climatic environments and the impact of climatic extremes on airborne disease organisms and their hosts defense mechanisms; measurement techniques used in plant bioclimatology, including thermoelectric methods of measuring sap flow and transpiration in plants, remote sensing techniques: the use of lasers in both spectrofluorometry, and the study of the geometrical structure of plant canopies and the use of radar mounted in aircraft and satellites to monitor forest size and state.
