

Plant Diseases Management in Horticultural Crops

The rapid change in the agro-ecosystem leaves a snag in the establishment of harmony the discard of the disturb ecosystem due to wide usage of chemical pesticides, fertilizers, and synthetic plant growth regulators. The long term effect were overlooked hence, boom of one time become bane for the ecosystem degradation. At the present context, it has become indispensable to look for sustainable crop protection management approaches for disease management and the present book is an effort to this direction. The diseases of economic importance caused by fungi, bacteria, viruses and virus like organisms of each crop are covered, describing their history, distribution, losses incurred, symptoms latest diagnostic tools, epidemiology and integrated applied management approaches including cultural, chemical, genetic resources, use of bio-control agents being adopted world-wide. The layout of each chapter includes a brief introduction and pathogen-wise description of the diseases. Some chapters are vividly illustrated with photographs of typical symptoms, graphs, tables and line drawing to make the subject more interesting and easy to understand for students, Scientists, Planners, Administrators, Growers and other end users with latest pertinent references. The book contains recent information on IDM, Concepts and Practices in Integrated Plant Diseases Management, biological control, Emerging and threatening diseases of plants, detection, diagnosis, and management; Diseases of saffaron, Egg plant Chili, Maize, apple, minor millets, Cotton, Sunflower, chickpea, strawberry, Lentil Rust, chickpea, Plant disease management through resistance, Role of Nutrients in Plant Diseases Management, Nonpathogenic disorders in tomato and their management, Nonpathogenic diseases of potato tubers, Aflatoxins: Threats in food stuff, Characterization and

Management of Papaya Ringspot Virus, Cloning, Sequencing and Transformation of Coat Protein Gene of Papaya Ringspot Virus, Eco- Management of Plant Diseases through Bio-agents, Eco-friendly Management of Fusarial Wilts of Vegetable and Fruit Crops.
