

Advanced Functional Molecules and Polymers: Processing and Spectroscopy (Advanced Functional Molecules and Polymers, Volume 2)

Consolidates the current knowledge of science and technology of polymers and other low molecular weight organic materials into a four-volume reference source. Topics covered include their synthesis, processing, theoretical theory, spectroscopy, structure-property relationship to device applications. The aim of these books is to bring together all aspects of functional molecular and polymeric materials currently studied in academic and industrial research by covering every single aspect of their science and engineering. Volume 2 focuses on processing and spectroscopy of polymeric materials covering various spectroscopic techniques.
