

The Secrets To Understanding Human Behaviour

This book is written in a style that is easy to read, containing no jargon or technical terms. It addresses the age-old conundrum of why people do what they do. This includes emotions, beliefs, values and habitual behaviours. In investigating and developing this work the author has not only used his advanced knowledge of hypnosis and NLP but also drawn on his earlier training in Engineering and thirty years work in computer development and research. This unique blend was influenced by the famous saying: - Why is it so? His early training taught him that in any field there is one principle. If there is a problem there is a cause, find the cause and you have a good chance of fixing the problem. This led to his motto: Treat the cause and not the symptoms This book is sure to challenge some of your widely held beliefs concerning human behaviour. In particular it provides in depth education and shows how any emotion, belief, value or motivation can be changed. A must read for anyone interested in understanding others and themselves,
