

Pulses, Sugar and Tuber Crops (Genome Mapping and Molecular Breeding in Plants)

Pulses, Sugar and Tuber Crops comprises reviews contributed by 47 eminent scientists from 10 countries. The chapters on common bean, pea, cowpea, sugarcane and potato include comprehensive reviews of voluminous research findings. Fundamental aspects and molecular results are also presented for eight orphan crops of high agroeconomic importance including mungbean, lentil, chickpea, lathyrus, pigeonpea, sweet potato, cassava and yam. Works on quinoa and Bambara groundnut are reviewed for the first time.
