

Geophysical & Astrophysical Convection (The Fluid Mechanics of Astrophysics and Geophysics)

Geophysical and Astrophysical Convection collects important papers from an international group of the worlds foremost researchers in geophysical and astrophysical convection to present a concise overview of recent thinking in the field. Topics include: Atmospheric convection, solar and stellar convection, unsteady non-penetrative thermal convection, astrophysical convection and dynamos, dynamics of cumulus convection, helical buoyant convection, transport phenomena, potential vorticity, rotating convective turbulence, and the modeling and simulation various types of convection and turbulence.
