

## Rust Diseases of Willow and Poplar

In recent years, there has been increased interest in growing willow and poplar trees, as fast-growing species that have several purposes, including use as biofuels for energy production. However, silviculture of these trees has been constrained by diseases such as *Melampsora* rusts. This book provides a comprehensive review of over two decades of extensive study of the rust diseases affecting willow and poplar. It provides insights into the population biology of *Melampsora* rusts in Europe, China, India and Chile, the genetics of their resistance, and their interaction with their hosts. The book offers information essential to the development of effective and sustainable disease control measures including the use of willow genotype mixtures and biological control agents.

**Buy Rust Diseases of Willow and Poplar Book Online at Low Prices** In the Midwest, premature defoliation of willows, poplars, aspens, and cottonwoods is often caused by three or four leaf rust fungi in the genus *Melampsora*.
