

Civil Service Systems in Western Europe (Civil Service Systems in Comparative Perspective series)

This work presents a comprehensive overview of the important issues in modern bureaucracies and provides a comparative analysis of nine Western European nations. Each chapter focuses on a separate country emphasizing the specific nature and development of civil service systems and paying special attention to the present features of each country's civil service. The book initially examines the structural dimensions of civil service systems, explored through themes such as internal labour markets and reform and diffusion. The interface between civil service systems and their political and social environment is also analyzed. The work concludes with a comparison between the systems already discussed, attempting to explain possible parallels and similarities between them.
