

World Catalogue & Bibliography of the Jewel Beetles (Coleoptera: Buprestoidea): Chrysochroinae: Sphenopterini Through Buprestinae: Stigmoderini (Faunistica)

This is the first complete world catalogue of the jewel beetles, the eighth largest beetle family Buprestidae and its small North American sister-group Schizopodidae, since Jan Obenbergers six fascicle (1926-1937) contribution to the Horn & Schenkling Coleopterorum Catalogus. Published in five volumes (3125 pages in total), this catalogue presents a full taxonomic history for all taxa, including fossils, along with distribution and type repository data. The catalogue follows the evolving modern classification which, for Buprestidae, employs 6 subfamilies, 47 tribes, 39 non-nominate subtribes, 513 genera and more than 14700 valid species. In addition, the first large bibliography on the subject concludes the catalogue with more than 8000 citations. The present volume 2 includes the remainder of Chrysochroinae (including the second and third large genera Sphenoptera and Castiarina) and the first part of Buprestinae.
